

Chooladeva Piyasiri

Data Analyst

Colombo, Sri Lanka | chooladeva.lp@gmail.com | (+94) 711 555 636 |

[LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFILE

Detail-oriented Data Analyst with hands-on experience in data analysis, machine learning, business intelligence, and big data technologies. Skilled in Python, SQL, Power BI, and Tableau, with experience developing predictive models, interactive dashboards, and data-driven solutions. Strong ability to transform complex datasets into actionable insights that support business and operational decision-making.

AREAS OF EXPERTISE

- ANALYTICS & BI:** SQL (SQL Server, MS SSIS), Power BI (DAX, Power Query), Tableau, Excel (Pivot Tables, Dashboards, Lookups)
- PROGRAMMING:** Python (Pandas, NumPy, Scikit-Learn, Seaborn, Matplotlib), R (Tidyverse)
- ML & NLP:** Scikit-Learn, NLTK, spaCy, Hugging Face, PyTorch, OpenCV
- BIG DATA:** Apache Spark, Hadoop (HDFS, Hive), MapReduce

PROFESSIONAL EXPERIENCE

Data Science & AI Intern | June 2024 –December 2024

Scicom Lanka (Pvt.) Ltd – Colombo, Sri Lanka.

- Built an end-to-end automated passenger risk-screening pipeline processing 64,000+ immigration records per flight, replacing manual analyst rule-writing with an ML-driven flagging system.
- Engineered 18+ behavioral and document-based risk features (travel frequency, visa validity, nationality mismatch, last-minute booking patterns) and applied K-Means clustering, Isolation Forest, and an Autoencoder to identify anomalous passengers.
- Generated human-readable flagging rules using FP-Growth association rule mining, enabling non-technical officers to understand and act on each flag with clear plain-English explanations.
- Implemented a PPO reinforcement learning environment to prioritize the most effective flagging rules, laying the groundwork for a self-improving rule-selection system.

Data Science Intern | January 2023 –April 2023

Data Glacier Academics & IT Consulting

- Applied Python-based data analysis and machine learning to build, deploy, and govern analytical models, delivering visual insights and effectively communicating results to stakeholders.

EDUCATION

MSc in Big Data Analytics

Robert Gordon University, United Kingdom.

May 2025- Present

- Advanced Databases, Big Data Programming, Cloud Computing, Data Analysis, Data Mining, Research Methods, Data Warehousing, Text Analytics

BSc (Hons) in Data Science

Coventry University, United Kingdom.

Graduated: August 2024

- Big Data Analytics, Advanced Machine Learning, Data Visualization Using R & Tableau, Data Visualization & Interactive Dashboards Using Python, Data Visualization Using Power BI, SQL Databases and Business Analytics

SELECTED PROJECTS

Sales, Customer, Inventory & Staff Analysis

SQL, SSIS, Power BI

[GitHub Repository](#) | [Power BI Dashboard](#)

- Sales, inventory, and staff data were split across **10+ relational tables**, making reporting slow and inconsistent. Extracted and integrated this data using SQL **JOINS** and **Views** to create a unified reporting dataset.
- Transformed, cleaned, and aggregated data using **SQL** and **SSIS**, improving reporting accuracy and efficiency.
- Developed interactive **Power BI** dashboard that identified sales, inventory, customer, and staff performance trends to support business decision-making.

Healthcare Performance Analysis Dashboard

Power BI, DAX, Excel

[Power BI Dashboard](#)

- Cleaned and validated **55,500+ patient records** using **Excel** and **DAX** to improve data quality and consistency.
- Designed an interactive **Power BI** dashboard comparing hospitals and insurers across cost, patient volume, and clinical outcome metrics.

Supermarket Sales Forecasting Pipeline

Python, Scikit-learn, Pandas, Seaborn

[GitHub Repository](#)

- Outlets lacked a reliable way to anticipate demand for high-turnover product categories, leading to under- or over-stocking. Built end-to-end data engineering and machine learning pipelines to forecast next-week sales for these categories.
- Performed **EDA** and engineered predictive features using a modular Python pipeline for scalable processing.
- Developed forecasting model that generated actionable sales predictions to support inventory planning.

Big Data Weather Analysis & Prediction

Apache Spark, Hive, Hadoop MapReduce, Tableau

[GitHub Repository](#) | [Tableau Dashboard](#)

- Processed weather data (2010–2024) using **Hadoop**, **Hive**, and **Spark** to analyze district-level climate trends and extreme weather events.
- Developed a **Spark MLlib** prediction model to forecast periods of low May evapotranspiration.
- Created a **Tableau** dashboard to communicate climate insights for data-driven planning and decision-making.

Hotel Review Sentiment Analysis

Python, NLP, BERT, XGBoost

[GitHub Repository](#)

- Collected and analyzed **5,320 TripAdvisor reviews** from **116 hotels** using NLP and machine learning techniques.
- Built and evaluated sentiment classification models using **BERT**, **SVM**, **XGBoost**, **TF-IDF**, and **word embeddings**.
- Applied **BERTopic** for aspect-based sentiment analysis to identify customer opinions on rooms, food, and staff, producing actionable recommendations for hotel management.
